DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16 and 26-31, drawn to a method of making a device, classified in class 438, subclass 253.
 - II. Claims 17-25, drawn to a semiconductor device, classified in class 257, subclass 306.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the device of the group II invention need not be made by the process of the group I invention. Specifically, the device of the group II invention may be made by a process that selectively deposits oxide on the interlayer dielectric layer such that the buried contacts are exposed, as opposed to forming an intaglio pattern in a blanket oxide layer to expose the contacts.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2815

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
